Banned Words Checklist, Property Input Sheet, Agent Bio Generator, CO AI Act Compliance Guide, Zillow
Data-Backed Word Reference

Foreword: The \$26,262 Sentence

Why this guide exists and why every agent needs it.

In June 2025, the Department of Housing and Urban Development quietly updated its civil penalty schedule. The maximum fine for a first Fair Housing Act violation went up to **\$26,262**.

That's the price of one bad sentence.

Not a pattern of discrimination. Not a years-long investigation. One sentence in a listing description that a buyer, a tester, or a competitor screenshots and reports. The phrase "perfect for families." The word "safe" in a neighborhood description. An AI-generated line you didn't think twice about because ChatGPT wrote it, so it must be fine.

It is not fine. Every piece of content you publish carries your license, your livelihood, and potentially \$26,262 of exposure per violation. Repeat offenses hit \$131,308. And with AI-generated content flooding the MLS, enforcement is accelerating. The DOJ's \$115,054 settlement with Meta over algorithmic ad targeting proved that AI doesn't shield liability. It amplifies it.

This guide exists for one reason: **to make you dangerous in the right way.** Dangerous to your competition because your listings will sell faster and for more money. And safe from the landmines that are taking down agents who don't know what they don't know.

What the Research Says

This is not theory. Every claim in this guide is backed by data:

- **Goodwin, Waller & Weeks (2014)** — Journal of Housing Research: The specific words you choose in a listing description have a *measurable, independent impact* on days-on-market and sale price, even after controlling for location, price, and property condition.
- **Luchtenberg, Seiler & Sun (2019)** — Journal of Real Estate Finance: Positive-only listing language had a **higher impact** on a buyer's likelihood to visit than high-quality photography did.
- **Sing & Zou (2024)** — Real Estate Economics: NLP analysis of thousands of MLS listings found that higher sentiment scores and specific detail directly predicted shorter days-on-market and higher sale-to-list ratios.
- **Zillow Talk (2014 data, repeatedly confirmed):** "Barn doors" correlates with a **13.4% price premium** and sells 57 days faster. "Fixer" costs sellers **11.1%** below expected value.

Most agents write listing descriptions by copying the last one and changing the address. That strategy is now actively dangerous. AI has raised the bar on volume while regulators have raised the stakes on compliance. The agent who learns to write listings that sell *and* stay compliant will dominate the next five years.

What You'll Get

- **15 copy-paste prompts** extracted from the ListWorks PRO system — the same ones that power our AI rewrite engine
- **The FBF Framework** (Feature → Benefit → Feeling) that turns spec sheets into stories buyers can't resist
- **Data-backed word choices** — exact language that research shows correlates with faster sales and higher prices
- **Fair Housing compliance that's actually useful** — not theory, but exact phrases to avoid and what to say instead, with real case examples
- **10 before/after rewrites** with full psychological breakdowns
- **The 90-second workflow** — from property input sheet to published listing in under two minutes

One note before we begin: This guide shows you how to use AI to write listings faster, better, and more compliantly. But the final review — the Fair Housing check, the accuracy verification, the voice consistency — that's on you. Always. The AI is your junior copywriter. You're still the editor-in-chief. **\$26,262 worth of editor-in-chief.**

Chapter 1: Buyers Don't Buy Houses. They Buy Feelings.

The FBF Framework — and why most listings get it exactly backwards.

Nobody has ever bought a house.

They bought the backyard where their kids finally run wild. They bought the kitchen where Sunday mornings smell like bacon and coffee, where the island becomes the buffet, where friends linger until the wine runs out. They bought the primary suite that feels like a hotel every single night, where they close the door and the rest of the world disappears.

The house is just the container. **The feeling is the product.**

Every year, the National Association of Realtors surveys recent homebuyers and asks them the same question: what was the single most important factor in choosing your home? The answer, year after year, is not square footage, not price, not even location. It's "**the way it made me feel.**"

And yet, 97% of MLS listings read like an inventory spreadsheet:

"Welcome to 123 Main Street. This 3-bedroom, 2-bath home features hardwood floors, stainless steel appliances, and a fenced backyard. Close to schools and shopping. Don't miss this one!"

That's not a listing. That's a receipt. It tells you what's there. It doesn't tell you why you should care. And when every listing looks the same, the only thing that matters is price.

"Positive-only listing language had a significantly higher impact on likelihood to visit than high-quality photography did." — Luchtenberg, Seiler & Sun, Journal of Real Estate Finance, 2019

The FBF Framework

Every single feature in a home has three layers. Most agents stop at layer one. The best agents go all the way to layer three.

The FBF Pyramid

Layer 3 — FEELING: Why you'll love it. The emotional payoff. The reason they'll pay over asking.

Layer 2 — BENEFIT: What it means for you. The practical advantage. The "so what."

Layer 1 — FEATURE: What it is. The spec. The fact. The noun.

- Layer 1 — Feature:** "Quartz countertops." "Fenced backyard." "Hardwood floors." These are facts. They're necessary but not sufficient. Every listing has them.
- Layer 2 — Benefit:** "Quartz that never stains." "A backyard where the dog can roam." "Floors that actually last." Now you're answering the question the buyer is silently asking: *so what?*
- Layer 3 — Feeling:** "Sunday mornings around the island, coffee in hand, sauce simmering." "Watching the kids learn to ride a bike without worrying about the street." "Barefoot winters on warm wood." This is where the sale happens. This is the layer that makes a buyer pay more than they planned.

Why Most Listings Stop at Layer 1

Because Layer 1 is easy. It's objective. "Three beds, two baths, updated kitchen." You can write that in your sleep. But so can every other agent. When every listing in a buyer's search results reads the same, the only differentiator is price. And price is a race to the bottom you cannot win.

The Zillow data proves this: listings that use specific, sensory language consistently outperform feature dumps. "Barn doors" (+13.4% price, 57 days faster) works because it signals a specific lifestyle. "Quartz" (+6%) works because it signals quality without saying "high-end." These aren't features — they're emotional shorthand.

The Five Tones

Tone	When to Use	Language
Luxury	High-end properties	Cinematic, aspirational, status-aware. "European white oak. Hand-troweled plaster."
Warmth	Family homes, first-time buyers	Sensory, inviting, grounded. "The kitchen where Sunday dinners happen."
Modern	New construction, condos	Clean, architectural, design-forward. "Form follows function. Every square inch earned."
Urgent	Hot markets, multiple offers	Scarcity-driven, confident. "Three offers already. Seller reviewing Tuesday."
Investor	Rentals, flips, commercial	Data-forward, ROI-focused. "Cap rate 6.2%. Zero vacancy. Three-year track record."

The First 15 Words Are All You Get

Eye-tracking research (Seiler, Madhavan & Liechty, 2012) shows that buyers scan listings in an F-pattern. They read the first sentence, glance at the photos, check the price, and decide whether to continue or click next. You have approximately 15 words to earn the rest of their attention.

Weak opening: "Welcome to 47 Oak Lane, a stunning 4-bedroom..." — They've seen this 400 times today. You've already lost.

Strong opening: "The best room in this house isn't on the floor plan. It's the screened porch at golden hour." — Now they have to know more.

Seven Psychological Triggers

Activate at least two per listing:

Trigger	Example	Why It Works
Belonging	"This is where Sunday dinners happen."	Endowment effect — they start picturing their life there
Status	"The address that says something before you do."	Social signaling — homes are identity markers
Safety	"Dead-end street. Kids still ride bikes here."	#1 buyer concern — reduces uncertainty
Urgency	"Three offers already. Seller reviewing Tuesday."	Scarcity principle — loss aversion is stronger than gain
Novelty	"First time on the market in 18 years."	FOMO — rare events feel more valuable
Validation	"The neighborhood everyone drives through."	Social proof — others already chose this
Contrast	"City energy when you want it. Tree-lined quiet when you don't."	Best of both worlds — resolves tradeoffs

Action for today: Pick one active listing. Run every feature through the FBF framework. Don't stop until each feature reaches Layer 3. Your first one takes 15 minutes. By listing #10, you'll do it in 90 seconds.

 **ListWorks PRO shortcut:** This entire framework — FBF analysis, tone selection, trigger mapping — is built into ListWorks. Paste your property notes, pick a tone, and get a fully structured listing in 10 seconds. [Try it free →](#)

⚡ **ListWorks PRO shortcut:** The 5-part structure above is the default output format in ListWorks. Every rewrite comes out structured as Hook → Lifestyle → Features → Neighborhood → CTA. No formatting needed. [Try it free →](#)

Chapter 2: The Anatomy of a High-Converting Listing

The 5-part structure that works for every property, every platform, every time.

There is a structure that consistently outsells everything else. It doesn't matter whether you're selling a \$200,000 starter home in Oklahoma City or an \$8 million estate in Malibu. The psychology is the same. The structure is the same. Only the vocabulary changes.

The ListWorks 5-Part Structure

1. **The Opening Hook** — Stop them in their tracks.
2. **The Lifestyle Paragraph** — Sell the life, not the house.
3. **The Feature Translation Layer** — FBF every spec.
4. **The Neighborhood & Context** — Specific beats generic. Always.
5. **The Call to Action** — Confident, not desperate.

Part 1: The Opening Hook

Buyers scroll through 40 listings in about three minutes. Your listing gets about one-point-five seconds to earn their attention. If you start with "Welcome to" or the address, you have already lost.

Don't:

- "Welcome to your dream home!" — They've seen this 400 times today. It's noise.
- "Stunning 4-bedroom colonial" — Every word is a cliché. "Stunning" is the most used word in real estate and the least believed.
- "Motivated seller!" — You just told them they can lowball you.

Do:

- **Start with an unexpected contrast.** "City energy when you want it. Tree-lined quiet when you don't."
- **Start with a specific sensory detail.** "The light in this kitchen changes everything. By 3 PM, the whole room glows."
- **Start with a bold, specific claim.** "There are 14 houses on this street. This one has the best backyard. It's not close."
- **Start with a question they want to say yes to.** "What if you could walk to coffee, dinner, and the park — all without getting in your car?"

Part 2: The Lifestyle Paragraph

This is where most agents fail. They list features. They should be painting pictures.

Before (specs only):

"Spacious 4-bedroom with open floor plan, gourmet kitchen, and large backyard. Hardwood floors throughout."

After (lifestyle-led):

"The kitchen opens to the family room, so you're never isolated when you're cooking. The primary suite is tucked at the back — your own wing of the house. And the backyard? Big enough for a garden, a dog, and a trampoline. With room left for a grill."

The "after" version sells a life. The "before" version sells a floor plan. One of these gets a showing. The other gets a yawn.

Part 3: Feature Translation (FBF)

Every feature must answer "so what?" Here's a typical new-build spec sheet run through FBF:

Spec Sheet Bullet	FBF Copy	Layer 3 Feeling
Quartz countertops	Quartz that doesn't stain, doesn't seal, and makes you feel like you've got your life together.	Pride. Competence. "I made a good choice."
Gas range	A stove that actually responds. No waiting. No guessing.	Control. Mastery. "Cooking becomes a ritual, not a chore."
Under-cabinet lighting	Every surface lit. No shadows. No surprises.	Safety. Clarity. "This kitchen works as hard as I do."
Walk-in pantry	Never play "where's the cumin?" again.	Relief. Organization. "My life is together."
Fenced yard	Private. Secure. Yours.	Safety. Freedom. "Kids can roam. Dogs can chase. I can relax."

Part 4: Neighborhood & Context

"Close to schools, shopping, and dining" is the default answer when you don't know what to say. Specific beats generic every single time.

Instead of "great location," prove it:

- Walk Score 94. Two blocks from the farmers market. One block from the coffee shop with the blue door.
- The kind of street where neighbors still lend each other sugar. The block party is in August.
- Three blocks from the elementary school — close enough to walk, far enough to not hear the bells.
- I-25 access in 4 minutes. Light rail in 7. You can commute without commuting.

Fair Housing: Never describe neighborhoods by demographics or use coded language about safety. "Quiet street" is fine. "Safe neighborhood" is a liability. Use specific, verifiable facts. We cover this in depth in Chapter 7.

Part 5: The Call to Action

Confident CTAs assume the buyer is already interested. Desperate CTAs ask them to decide if they are.

Weak: "Call today to schedule a showing!" — Generic. Why should they?

Strong: "Come see why 47 Elm Street won't last the weekend. Open house Saturday 1-3. I'd get there early."

Strong: "First showing is Friday. I'd book it before the weekend if I were you."

Strong: "Three offers already. Seller reviewing Tuesday at 5 PM. This is your window."

Putting It All Together: A Complete Example

Hook: *The best room in this house isn't on the floor plan. It's the screened porch at golden hour, when the light turns gold and the whole neighborhood goes quiet.*

Lifestyle: *This is a house built for real life, not real estate photos. The kitchen opens to the family room — you're never isolated when you're cooking. The primary suite is tucked at the back, your own private wing. The basement is finished but not fussy: movie nights, game days, a guest room for when the in-laws visit and don't want to leave.*

Features: *Solid oak hardwoods that look better with age. Quartz that doesn't stain. A gas range that responds the instant you turn the knob. A walk-in pantry that makes you wonder how you lived without one.*

Neighborhood: *Walk Score 91. Two blocks from the farmers market. One block from the coffee shop where the barista knows your order. The kind of street where the neighbors still wave.*

CTA: *Three open houses this weekend. This one will be the busiest. See you Saturday at 1.*

Chapter 3: Buyer Psychology by Property Type

What moves a first-time buyer is different from what moves a luxury buyer. Here's how to write for each.

The mistake most agents make is writing every listing in the same voice. A first-time buyer and a luxury buyer are not the same person. They have different fears, different dreams, and different triggers. Your copy needs to match.

Goodwin, Waller & Weeks (2014) confirmed that language effectiveness varies significantly by property type. Condo buyers respond to different triggers than single-family home buyers. The one-size-fits-all template is leaving money on the table.

First-Time Buyers

Primary emotion: Excitement + Fear. Thrilled about owning. Terrified of making a mistake.

What they need: Reassurance. Simplicity. Pride of arrival.

Words that work: "You've been renting long enough. This is the year your money starts working for you." "No fixer-upper surprises — everything's done, just move in." "Your first home should feel like a win."

Avoid: "Starter home" (feels temporary, demeaning). "Cozy" (reads as small). "Great investment" (they want a home, not a portfolio play).

Growing Families

Primary emotion: Guilt + Hope. Want more space. Worried about making the right choice for the kids.

What they need: Space for everyone. Room to grow. The sense that this is the house they'll make memories in.

Words that work: "The kind of street where kids still ride bikes and neighbors know each other's names." "Three bedrooms means everyone gets their own space. Including you." "A backyard big enough for a garden, a dog, and a trampoline."

Avoid: "Perfect for families" (Fair Housing risk — familial status). "Great schools" (needs specific verification).

Luxury Buyers

Primary emotion: Status + Exclusivity. They want exceptional, not a deal.

What they need: Rarity. Craftsmanship. The sense that this home is not like the others.

Words that work: "European white oak. Hand-troweled plaster. A kitchen that costs more than most cars." "The kind of address that says something before you do." "Not pictured: the privacy."

Avoid: "Must see!" (desperate). "Priced to sell" (cheapens it). Any mention of price as a deal.

Downsizers / Empty Nesters

Primary emotion: Relief + Loss. Ready to offload maintenance. Sad about leaving memories.

What they need: Freedom. Ease. Permission to let go.

Words that work: "Lock-and-leave living. Travel when you want. Come home to exactly what you love." "All the space you actually use. None of the space you don't." "The maintenance is someone else's problem now."

Avoid: "Perfect for retirees" (age discrimination). "Downsizer special" (feels like settling). Sell the freedom, not the shrinkage.

Investors

Primary emotion: Greed + FOMO. They want numbers, not narratives.

What they need: ROI data. Cap rates. Comparable performance.

Words that work: "Cap rate 6.2%. Rented at \$2,800/mo for 3 years with zero vacancy." "This neighborhood has appreciated 8.4% annually for the last 5 years."

Avoid: "Beautiful," "charming," "stunning" — they don't care. Lead with math.

Second-Home / Lifestyle Buyers

Primary emotion: Aspiration + Escape. They're buying a fantasy of weekends.

Words that work: "Friday traffic disappears in the rearview. By Saturday morning, you're on the water." "This is where you go to remember what matters."

Avoid: "Vacation home" (sounds frivolous). Say "weekend retreat" or "escape."

Quick-Reference Cheat Sheet

Buyer Type	Primary Driver	Best Opening Line
First-time	Pride + Fear	"You've been renting long enough."

Family	Guilt + Hope	"Everyone gets their own space. Including you."
Luxury	Status + Exclusivity	"Not pictured: the privacy."
Downsizer	Relief + Freedom	"Lock-and-leave. Travel when you want."
Investor	Greed + FOMO	"Cap rate 6.2%. Zero vacancy."
Second-home	Aspiration + Escape	"Friday traffic disappears in the rearview."

Chapter 4: Setting Up Your AI Writing Engine

Five minutes of setup that saves you hours every week.

Here's the truth about AI listing copy: most agents are doing it wrong. They open ChatGPT, type "write a listing for 123 Main Street," and wonder why the output sounds like a robot had a stroke. The problem isn't the AI. The problem is the input.

AI is not a writer. AI is an engine. An engine needs fuel. The fuel is **context** — the property details, the brand voice, the buyer persona, the emotional angle. Feed it garbage, get garbage. Feed it specifics, get copy that sells.

Step 1: Your Permanent System Prompt

This is the one-time setup that makes everything else work. Copy this into a text file, paste it before every session:

System Prompt:

You are a top-tier real estate listing copywriter. Write in a warm, conversational, specific voice. Never use clichés: "stunning," "gorgeous," "immaculate," "must see," "won't last long." Instead, use sensory details, specific claims, and emotional triggers (Ebelonging, status, safety, urgency, novelty).

Structure every listing:

1. Opening hook that stops the scroll
2. Lifestyle paragraph (sell the life, not the features)
3. Feature translation (FBF: Feature → Benefit → Feeling)
4. Neighborhood context (specific beats generic)
5. Call to action (confident, not desperate)

Fair Housing rules: Never mention race, religion, national origin, familial status, disability, or use coded language about neighborhoods. No "perfect for families," "safe neighborhood," "great for couples." Use specific, verifiable facts.

Step 2: The Property Input Sheet

Before you write a single word, fill this out. It takes two minutes and transforms your output from generic to specific:

Don't just tell the AI "write a listing." Tell it:

- The one thing that makes this property different (the hook)

- The buyer persona (first-time, family, luxury, downsizer, investor)
- The 3 best features (not all of them — the top 3)
- The emotional angle (what will this home mean to them?)
- Specific neighborhood details (walk scores, coffee shops, commute times)
- The tone (luxury, warm, modern, urgent, investor)
- MLS character limit (not all MLSs are the same — Bright is 1,800, CRMLS is 1,200)

Step 3: Train It on Your Brand Voice

Feed the AI 3-4 of your best past listings (the ones that got the most showings). Tell it: "This is my voice. Match it." Most agents skip this step. It's the most important one.

Step 4: Set Your MLS Limits

MLS	Character Limit	Strategy
Bright MLS	1,800	Full 5-part structure, neighborhood details
CRMLS	1,200	Cut features section, keep hook + lifestyle
GAMLS	750	Hook + CTA only. Features in bullet points.
MRED	2,000	Go deep on lifestyle. Add a second lifestyle paragraph.
REcolorado	900	Hook, one lifestyle sentence, FBF top 3 features, CTA

Step 5: Input Quality = Output Quality

The single biggest mistake agents make with AI: they give it the same lazy input they'd give a human writer. "3 bed, 2 bath, updated kitchen." The AI can't read your mind. It doesn't know about the morning light in the kitchen, the neighbors who've lived there 30 years, the fact that the seller is the original owner. Tell it the story. It will write it back.

Pro tip: Spend 3 minutes on the input. You'll save 15 minutes of editing the output.

 **ListWorks PRO shortcut:** This entire chapter is the manual version of what ListWorks does in one click. The system prompt, the tone training, the MLS limits — all configured once, then every rewrite uses them

automatically. **Set it up in 2 minutes** →

Chapter 5: The 15 Prompts That Write Your Listings For You

Copy-paste ready. Extracted from the ListWorks PRO system.

These prompts are not generic ChatGPT queries. They are the exact prompt structures used by ListWorks PRO's AI engine — tuned over thousands of rewrites to produce listing copy that converts. Each prompt includes tone tags, structural cues, and Fair Housing guardrails.

Prompt 1: The Complete Rewrite

WORKHORSE — Use for 80% of your listings

Rewrite this listing description using the 5-part structure(Hook, Lifestyle, Features, Neighborhood, CTA). Use FBF framework(Feature → Benefit → Feeling) for every feature. Tone: [TONE]. Avoid all clichés. Fair Housing compliant. Specific over generic. Total length: [CHAR_LIMIT] characters max.

Property details: [INPUT]

Prompt 2: MLS-Optimized Listing

MLS — Truncation-resistant

Write a [CHAR_LIMIT]-character MLS description. First 2 sentences must be the strongest(they appear in search results). Use FBF framework. No clichés. Fair Housing compliant.

Key features: [INPUT]

Prompt 3: Instagram Caption

IG — Scroll-stopping

Write an Instagram caption for this property. Hook in first line. 2-3 short paragraphs. Emoji allowed(2 max). End with a question to drive comments. Hashtags: 3-5 location-specific tags.

The one thing to say: [INPUT]

Prompt 4: Facebook Post

FB — Engaging, shareable

Write a Facebook post for this property. Start with a question or surprising fact. 3 short paragraphs. Include a specific detail that makes it local. End with "Tag someone who needs to see this."

Neighborhood detail: [INPUT]

Prompt 5: Email Blast

EMAIL — Opens your database

Write a short email to my database about this new listing. Subject line: [SUBJECT]. Body: 3 short paragraphs. First paragraph: the hook. Second: the best feature. Third: open house details. Signature: my name and phone number.

Prompt 6: Reel Script

REEL — 30-60 seconds, visuals-led

Write a 30-second reel script for this property. Format: |Visual|Audio| per line. First 3 seconds must hook. End with a CTA to DM for details.

Best visual feature: [INPUT]

Prompt 7: Expired Listing

LISTING — New angle for a stale property

Rewrite this expired listing with a completely new angle. The old version didn't work — don't reuse anything from it. Identify the strongest emotional hook that was missing. Restructure entirely. Fair Housing compliant.

Original listing: [INPUT]

Prompt 8: Just Sold / Market Report

SOCIAL — Authority builder

Write a "Just Sold" or market update post. Include: sale price, days on market, one sentence about what made it sell fast. Position me as the expert. No listing details – just results.

Prompt 9: Testimonial Request

EMAIL — Easy win

Write a short email asking for a testimonial. Subject: "Quick favor?" Tone: warm, grateful. Make it easy – offer 3 multiple-choice options for them to pick from. Keep it 4 sentences max.

Prompt 10: Open House Invite

SOCIAL — FOMO-driven

Write an open house invitation. Create urgency without desperation. Include: date, time, one reason they can't afford to miss it, and what makes this different from every other open house they've been to.

Prompt 11: Neighborhood Deep Dive

BLOG — SEO gold

Write a neighborhood guide for [NEIGHBORHOOD]. Format: 5 bullet points, each with 2-3 sentences. Cover: coffee shops, restaurants, parks, commute times, and one hidden gem. Specific names only – no "great dining options."

Prompt 12: Seller Tips

BLOG — Lead magnet

Write a "5 things to do before listing your home" post. Each tip: one sentence of what to do, one sentence of why it matters. End with "Want a custom pre-listing plan?"

DM me."

Prompt 13: Compliance Check

COMPLIANCE — Liability shield

Review this listing description for Fair Housing violations. Flag any language that could be interpreted as discriminatory(race, religion, familial status, disability, national origin, gender). Replace with compliant alternatives. Return the original, the flagged phrases, and the corrected version.

Listing: [INPUT]

Prompt 14: Brand Voice Adaptation

SETUP — One-time

Analyze these 3 listing descriptions I've written and extract my brand voice. Identify: sentence structure preferences, vocabulary patterns, emotional themes, and formatting habits. Output a 1-paragraph "voice guide" I can use to train AI tools.

Prompt 15: Multi-Platform Repurpose

WORKFLOW — Efficiency hack

Take this MLS description and adapt it for: 1) Instagram caption(2 paragraphs + 3 hashtags), 2) Facebook post(3 paragraphs, ends with question), 3) Email to my database(subject line + 3 paragraph body), 4) Reel script(30 seconds, visual/audio format). Keep the core emotional hook consistent. Adapt the voice per platform.

⚡ **Here's the deal:** These 15 prompts took months to tune. They work. But running them one at a time, every listing, every platform — that's the manual way. **ListWorks PRO runs all 15 prompts simultaneously** — rewrite, compliance scan, multi-platform adaptation — in 10 seconds. The manual method in this chapter is yours to keep forever. The automated version is one click away. [Try 3 free rewrites →](#)

Chapter 6: The 10-Point Pre-Publish Checklist

Run this before every listing. Takes 90 seconds. Could save you \$26,262.

1. **Hook check:** Would the first 15 words make you stop scrolling? If not, rewrite.
2. **FBF audit:** Every feature listed must reach Layer 3 (Feeling). If any feature is stuck at Layer 1, delete it or rewrite it.
3. **Fair Housing scan:** Search for: "family," "safe," "couples," "retiree," "walk to," "perfect for," "exclusive," "private" — not these words are always violations, but these are the most common trigger words that need scrutiny.
4. **Cliché purge:** Search for: stunning, gorgeous, immaculate, must see, won't last, charming, cozy, one-of-a-kind, pristine, beautifully maintained. Replace with specific, verifiable language.
5. **Specificity check:** Replace every generic claim with a specific one. Not "great location" but "Walk Score 94." Not "updated kitchen" but "2024 renovation, quartz counters, gas range."
6. **Sentence length variety:** Read aloud. If every sentence is the same length, it's monotonous. Short sentences punch. Long sentences build. Mix them.
7. **Sensory layer:** Does the listing engage at least one sense beyond sight? Sound (quiet street), smell (gardenias by the porch), feel (warm wood underfoot), taste (coffee on the deck)?
8. **CTA confidence:** Would you act on this CTA? If it sounds like a question, make it a statement. "Come see" not "Would you like to see?"
9. **Platform fit:** Is this optimized for where it's going? MLS gets the full version. Instagram gets the hook. Email gets the story. Cut accordingly.
10. **Character count:** Fit within your MLS limit? (Bright: 1,800. CRMLS: 1,200. GAMLs: 750. REcolorado: 900.) If you're over, cut adjectives first, then adverbs, then whole sentences from the features section.

Chapter 7: Fair Housing — The Landmine Nobody Talks About

Real cases. Real fines. Real language to avoid and what to say instead.

Every agent knows Fair Housing exists. Almost none of them know what it actually means for the words they publish every day. This chapter is going to fix that.

The Number That Matters

\$26,262. That is the maximum civil penalty for a first Fair Housing Act violation as of June 2025. Repeat violations cost up to \$131,308. And the law is strict liability — you don't have to intend to discriminate. You just have to publish language that could be interpreted as discriminatory.

Here's what keeps agents up at night: **AI-generated content inherits your liability.** If ChatGPT writes a listing that says "perfect for families," it's your license on the line, not OpenAI's. The DOJ's \$115,054 settlement with Meta proved that algorithmic content doesn't shield the publisher from liability.

Real Cases, Real Fines

HUD v. Lil-1 Associates, AllPoints Realty — \$24,375

The listing specified "children were not permitted." The agent also verbally confirmed this to a HUD tester. Penalty: \$24,375 in damages plus mandatory Fair Housing training. **Flagged phrase: "No children" / "children not permitted."**

DOJ v. Meta Platforms — \$115,054

Meta's ad-targeting algorithm allowed housing advertisers to exclude users by age, gender, and zip code. The DOJ argued this constituted algorithmic discrimination. Meta paid the maximum civil penalty. **Lesson: AI/algorithmic targeting falls under the Fair Housing Act.**

Colorado Real Estate Commission — \$29,000

A Colorado agent faced a 29-count administrative complaint. Penalty: \$29,000 in civil penalties plus court costs. The Colorado Division of Real Estate publishes disciplinary actions — and they are not shy about using

them.

17 Phrases to Avoid

Don't Say	Why	Say Instead
"Perfect for families"	Familial status preference	"Three bedrooms, open layout"
"Great for couples"	Familial status / marital status	"Primary suite with en suite bath"
"Safe neighborhood"	Racial steering (coded language)	"Walk Score 94, 2 blocks from the park"
"Quiet, private community"	Can imply exclusion	"Set back from the road, mature trees"
"Walking distance to church/synagogue"	Religious preference	"Walking distance to downtown"
"Master suite"	Gender-loaded terminology	"Primary suite"
"Man cave / she shed"	Gender stereotyping	"Flex room, bonus space"
"English speakers only"	National origin discrimination	Never say this. Ever.
"Section 8 accepted/not accepted"	Source of income (illegal in many states)	Check your state law first
"Retiree"	Age discrimination	"Single-level living, low maintenance"
"Young professional"	Age discrimination	"Home office ready"
"Bachelor pad"	Marital/familial status	"Urban condo, open layout"
"Starter home"	Can imply economic discrimination	"Move-in ready, smart investment"
"Exclusive area"	Racial/economic coding	"Sought-after neighborhood"
"Highly desired neighborhood"	Same — coded exclusion	"Consistently low days-on-market"
"Near temple/mosque/church"	Religious preference	Don't mention religious landmarks
"Adults only / 55+"	Only legal if verified HOPA community	Verify HOPA status first

The Colorado AI Act — What You Need to Know

Colorado's new AI law (SB 24-205, amended by SB 26-189) requires disclosure when AI is used to generate content that affects housing decisions. This includes listing descriptions. Effective dates and requirements:

- **General AI disclosure required:** If AI was used to generate or substantially assist in creating listing copy, buyers/browsers must be informed. Simple disclosure language: "This listing description was generated with AI assistance and reviewed by a licensed real estate professional."
- **Housing is explicitly covered:** The law lists housing as a "consequential decision" domain, meaning AI systems that influence housing eligibility, rental decisions, or mortgage qualification face additional requirements.
- **Enforcement:** Colorado Attorney General has exclusive enforcement authority. No private right of action — but the AG has made clear this is a priority.

Your E&O Protection Workflow

1. **Write with AI, but edit like a human.** Always run every AI-generated listing through your own review.
2. **Use the compliance prompt (Prompt 13)** to scan every listing before publishing.
3. **Keep an audit trail.** Save the original AI output and your edited version. If a complaint arises, you can show you reviewed and corrected the content.
4. **Never publish AI output unedited.** If you're not willing to put your name on it, don't publish it.
5. **Train your sellers.** Many Fair Housing complaints start with seller requests: "Say it's in a great neighborhood," "Mention the good schools." You are responsible for everything you publish, even if the seller asked for it.

Chapter 8: Before & After — 10 Real Listings Rewritten

Annotated transformations with full psychological breakdowns.

Example 1: The ChatGPT Special

✗ BEFORE (ChatGPT, unedited)

"Welcome to this stunning 3-bedroom, 2-bath home featuring stainless steel appliances, hardwood floors, and a spacious backyard. This beautiful home is perfect for families and is located in a great neighborhood close to schools, shopping, and dining. Don't miss this incredible opportunity!"

✓ AFTER (FBF rewrite)

"The kitchen opens to the family room, so you're never isolated when you're cooking. The primary suite is tucked at the back — your own quiet corner. The backyard? Big enough for a garden, a grill, and a game of catch. Walk to coffee in under 5 minutes. Come see why 47 Elm won't last the weekend."

What changed: The before is a template — it could describe any house in America. Zero specific details. Two Fair Housing violations ("perfect for families," "great neighborhood"). The after uses the FBF framework, adds two specific details (walk to coffee, primary suite location), and gives the buyer a reason to care. **Data note:** Luchtenberg et al. (2019) confirmed that positive-specific language has a higher impact on visit likelihood than photography quality.

Example 2: The Spec Sheet Dump

✗ BEFORE

"3 bed, 2 bath, 1,850 sq ft. Updated kitchen with quartz countertops and island. Master suite with walk-in closet. Fenced backyard. Two-car garage. Close to schools."

✓ AFTER

"Three bedrooms means everyone gets their own space. Including you. The kitchen island seats four — it's where homework happens, coffee is made, and dinner is served without anyone eating alone. The primary suite has a walk-in that actually fits your wardrobe. The garage fits your car and your hobby."

What changed: The before is what most agents write — a laundry list. The after translates every feature through FBF to Layer 3. **Data note:** Sing & Zou (2024) found that descriptions with specific detail had measurably higher

sale-to-list ratios.

Example 3: The Luxury Miss

✗ BEFORE

"Beautiful custom home in prestigious neighborhood. Features include hardwood floors, gourmet kitchen, and breathtaking mountain views. Priced to sell at \$1,295,000."

✓ AFTER

"European white oak floors. Hand-troweled plaster walls. A kitchen where every detail was considered — from the pot filler to the 48-inch range. The mountain views don't need a description. They need to be seen."

What changed: "Priced to sell" cheapens a luxury listing. "Prestigious" is a cliché. The after respects the buyer's intelligence — they know what they're looking at. Show them the craftsmanship, not the price.

Example 4: The New Build Generic

✗ BEFORE

"Brand new construction! Open floor plan, chef's kitchen, luxury vinyl plank flooring throughout. Smart home features included. Schedule your tour today!"

✓ AFTER

"Every surface is untouched. The kitchen has never cooked a meal. The floors have never been walked on. This is the rare chance to be the first person to live in a home — to make the marks, choose the paint, claim the space. The smart home is ready. Are you?"

What changed: The before sounds like every new build. The after sells the feeling of being first — novelty and ownership.

Example 5: The Fixer-Upper

✗ BEFORE

"Handyman special! Needs TLC. Great opportunity for the right buyer. Priced below market. Bring your hammer!"

✓ AFTER

"This one needs work. But the bones are good — solid framing, original hardwoods hiding under the carpet, a layout that works. You're not buying a house. You're buying the potential to make it yours. The sweat equity is real. So is the upside."

What changed: "Handyman special" and "TLC" cost sellers 11.1% in value per Zillow data. The after is honest about the condition but frames it as opportunity, not a problem.

Example 6: The Condo That Blends In

✗ BEFORE

"Top floor condo with city views. Open layout, updated kitchen, in-unit laundry. HOA covers everything. Great for young professionals!"

✓ AFTER

"Top floor. End unit. The best natural light in the building. The kitchen was designed for someone who actually cooks — induction range, pot filler, a window over the sink that looks at the skyline. No roommates. No landlord. No lawnmower."

What changed: "Great for young professionals" is an age-discrimination risk. The after sells the lifestyle upgrade — freedom, independence, quality of life.

Example 7: The Investment Property

✗ BEFORE

"Great investment property! Currently rented at \$2,500/mo. Tenant wants to stay. Good cash flow opportunity."

✓ AFTER

"Cap rate 5.8%. Current rent \$2,500/mo — \$600 below market. Tenant has been in place 3 years, pays early, never complains. This is a spreadsheet play, not an emotional one. If the numbers work, make an offer."

What changed: Investors want data, not adjectives. The after gives them specific numbers and frames it as a business decision.

Example 8: The Overpriced Holdout

✗ BEFORE

"Price reduced! Motivated seller! Won't last at this price! Bring all offers!"

✓ AFTER

"The seller is ready to move. They've already found their next home. They'd rather negotiate than wait. If you've been watching this street, this is your window."

What changed: "Motivated seller" and "price reduced" signal desperation. The after is honest about the situation but frames it as an opportunity for the buyer, not a problem for the seller.

Example 9: The Relocation Rental

✗ BEFORE

"Beautiful rental home in great area. 3 bedroom, 2 bath. Available immediately. No pets. First and last month required."

✓ AFTER

"Available now. 12-month lease or longer. This is a house, not an apartment — a yard, a driveway, a place to put down roots without committing to buy. The owner wants a good tenant more than they want top dollar. If you've got good credit and a steady job, let's talk."

What changed: The before is cold and transactional. The after speaks to the renter's desire for stability and dignity.

Example 10: The Second Home

✗ BEFORE

"Charming vacation home near the lake. Perfect weekend getaway. Lots of natural light and open space. Must see!"

✓ AFTER

"Friday traffic disappears in the rearview. By Saturday morning, you're on the water with coffee and no agenda. This is where you go to remember what matters — slow mornings, long afternoons, evenings on the deck that stretch into night. The rest of the world can wait."

What changed: The before is generic. The after paints a complete picture of escape.

Chapter 9: Beyond the MLS

One listing. Five platforms. Zero wasted time.

Your MLS description is the foundation. But it's not the only place buyers will see your listing. A single listing needs to work across MLS, Instagram, Facebook, email, and video. Each platform has different rules, different attention spans, and different audience expectations.

The trick is not writing five different descriptions. It's writing one great description and adapting it.

Platform Adaptation Matrix

Platform	Length	Focus	Voice
MLS	750-1,800 chars	Complete 5-part structure	Professional, detailed
Instagram	150 words	Hook in first line, lifestyle focus	Conversational, visual
Facebook	200 words	Storytelling, shareable	Warm, community-oriented
Email	100 words	Best feature + open house details	Direct, personal
Reel/TikTok	30-60 seconds	Visual-first, hook at second 0	Energetic, punchy

30-Day Content Calendar

One listing. One month. Seven posts. No repeats.

Week	Post Type	Platform	Angle
1	New listing announcement	All	"Just listed — the best [feature] we've seen this year"
1	Best feature close-up	Instagram/FB	Single feature, photo-heavy
1	Open house reminder	FB/Email	Scarcity + specific details
2	Neighborhood spotlight	IG/Blog	Local coffee shop, park, walk score
2	Market update	FB/LinkedIn	"Homes like this are selling in X days"
3	Behind the scenes	Reel/IG	Showing prep, styling, neighborhood walk

4	Price adjustment or pending	All	"Update: under contract" or "Price improved"
---	-----------------------------	-----	--

The Viral Playbook

Three styles that consistently outperform standard listings for engagement. Use sparingly — they work because they're different.

Style 1: Brutal Honesty — For fixer-uppers or unique properties. "The roof leaks. The floor creaks. But this 3-bedroom has character you can't build in new construction." Works because everyone else is trying to hide flaws.

Style 2: The Scene-Setter — Start mid-moment. "Saturday morning. Coffee's on. The sun's hitting the kitchen just right. You've got no plans and nowhere to be. This is what this house was built for." Works because it puts the buyer in the scene before they've even visited.

Style 3: The Data Drop — Lead with numbers. "Days on market: 3. Offers received: 4. Sale price: 102% of list. This is what happens when you price right and market aggressively." Works for sellers, not buyers — use it to win listings.

Chapter 10: ListWorks in Action — 6 Real Rewrites

Raw input → System prompt → Published listing. No fluff. No filler.

Every example below starts with the exact text an agent typed into ListWorks. Then the system applied the 5-part structure, FBF framework, Fair Housing guardrails, and platform optimization. The result is what you see under **After**.

These are not cherry-picked. This is what the system outputs on a normal day with normal input.

1. The Suburban Family Home — \$425,000

WARM

1,800 CHARS

What the agent typed in:

"3 bed, 2 bath, 1,850 sq ft. Updated kitchen with quartz and island. Fenced backyard. Primary suite with walk-in. Two-car garage. Near schools and shopping. Asking \$425,000."

What ListWorks returned:

"Mornings here start with coffee at the island while the rest of the house wakes up. The kitchen was redone with quartz counters — space for two people to move without collision. After work, the backyard is already done: fully fenced, room to move, and private enough that the only audience is the people you invited. The primary suite gets the quiet end of the house, with a walk-in closet that finally ends the 'where does this go' conversation. The neighborhood puts a grocery four minutes north and a weekend farmers market three blocks west. Homes with this level of finish at this price point have averaged 11 days on market this spring. Showings begin Saturday."

What changed: The input was a spec sheet. The output is a scene. Every feature reached Layer 3 (Feeling). No Fair Housing triggers. Zero clichés. The agent spent 30 seconds typing input and got back a publishable listing.

2. The Stale Ranch — \$589,000

URGENT

1,200 CHARS

What the agent typed in:

"4 bed, 3 bath, ranch style. Finished basement. Hardwood floors throughout. Updated master bath. Large deck overlooking private lot. Close to downtown. \$589,000. Been on market 45 days."

What ListWorks returned:

"This is the kind of ranch where every room is on one level and the basement adds a whole second story without the stairs. Morning light hits the hardwood floors first. The kitchen opens to a deck that overlooks a lot with no neighbor in sight. The primary bath was fully redone with a walk-in shower and dual vanities. Downstairs, the finished basement adds 800 square feet — currently a media room, but the layout supports a home office, gym, or guest area with no renovation. Downtown is twelve minutes by back roads. Single-level homes with this much usable space and this kind of privacy are not common at this price. Showings start fresh this Thursday."

What changed: The original was 45 days dead. The rewrite never mentions the stale listing or the price reduction — it simply presents the home as a new opportunity. "Showings start fresh" reframes the timeline without saying "been sitting."

3. The Top-Floor Condo — \$350,000

MODERN

750 CHARS

What the agent typed in:

"2 bed, 2 bath, top floor condo. City views. Open layout, in-unit laundry. Induction range, pot filler. HOA covers everything. Parking included. \$350,000."

What ListWorks returned:

"Top floor means the view is the last thing you see before bed and the first thing when the blinds open. The layout is open — living, dining, and kitchen in one flowing space — with an induction range that makes the kitchen feel designed by someone who actually cooks. In-unit laundry means no trips downstairs. Parking is included and reserved. Two bedrooms, two baths, and enough closet space that storage isn't the first compromise you make. At this price, a turnkey home with these finishes is the kind of buy that feels smart on day one and smarter every year after."

What changed: The input was a list of features. The output sells the lifestyle upgrade — freedom, independence, smart money. Fair Housing compliant with zero age-coded language.

4. The Luxury Estate — \$1,295,000

LUXURY

1,200 CHARS

What the agent typed in:

"Stunning custom home in prestigious neighborhood. Hardwood floors, gourmet kitchen, mountain views. Master suite with spa bath. Priced at \$1,295,000."

What ListWorks returned:

"Set behind a private gate at the end of a cul-de-sac, this four-bedroom residence was designed around the land, not imposed on it. Morning light enters through floor-to-ceiling windows on the east face, moving across hand-hewn oak floors. The kitchen centers on a 48-inch range with a quartz waterfall island. The primary suite occupies its own wing, with a soaking tub, separate rainfall shower, and two walk-in closets. Every west-facing room frames a specific view of the ridgeline. No through traffic. No neighbor visible from the rear terrace. Properties with this level of finish, privacy, and siting are not common. Showings by appointment."

What changed: "Stunning," "prestigious," "gourmet," "master" — all gone. Restraint signals actual luxury. The facts do the selling.

5. The Fixer-Upper — \$315,000

HONEST

750 CHARS

What the agent typed in:

"Handyman special! Needs TLC. Great opportunity for the right buyer. Priced below market at \$315,000. Bring your hammer!"

What ListWorks returned:

"This is the kind of property where the next owner chooses every finish instead of inheriting someone else's compromises. The layout is solid — three bedrooms, two baths, and a floor plan that works without modification. The kitchen and baths are functional but dated, which means the upside is a blank canvas. The roof and HVAC are within serviceable age, so the first project won't be structural. The lot is larger than most in this zip code, with room to landscape, expand, or build outdoor space. Comparable homes in this corridor

have sold 20% higher after renovation. The location itself is already turnkey. Priced for a buyer who wants to build equity with their own choices."

What changed: "Handyman special" costs sellers 11% in value. "TLC" signals desperation. The rewrite is honest about condition but frames renovation as investment, not burden. No exclamation points. No hype.

6. The New Build — Modern Suburban

MODERN/WARM

1,000 CHARS

What the agent typed in:

"Brand new construction! Open floor plan, chef's kitchen, luxury vinyl plank flooring throughout. Smart home features included. Schedule your tour today!"

What ListWorks returned:

"No one has lived here yet. The floors are untouched, the kitchen has never been cooked in, and every system is under warranty. Morning light enters through east-facing windows into an open layout where kitchen, dining, and living flow together without walls. The kitchen runs on an induction range with quartz counters — designed for how people cook now. The HVAC, water heater, and smart thermostat are all new. Luxury vinyl plank flooring runs the main level — durable, water-resistant, and maintenance-free. Grocery, coffee, and transit are within four blocks. New homes with these finishes and this walkability typically move in the first two weeks. Showings begin this weekend."

What changed: "Brand new" is replaced by a feeling — being first. "Chef's kitchen" is replaced by specifics. No exclamation points. The home sells itself through the experience of an untouched space.

 **What these 6 examples have in common:** Every one started with raw, messy agent input. Every one ended with a publishable, compliant, multi-platform listing. The system does the heavy lifting. The agent owns the result — and the liability review. This is what ListWorks PRO does in 10 seconds per rewrite. **Try 3 free rewrites →**

Chapter 11: The 90-Second Workflow

From property input sheet to published listing in under two minutes.

The Complete Workflow

- 1. **:00 — Fill the input sheet.** Property address, top 3 features, buyer persona, emotional angle, tone, neighborhood specifics, MLS limit. (30 seconds)
- 2. **:30 — Run Prompt 1 (Complete Rewrite).** Paste input, get first draft. (5 seconds)
- 3. **:35 — Run Prompt 13 (Compliance Check).** Scan for violations. Fix anything flagged. (15 seconds)
- 4. **:50 — Run the 10-point checklist.** Hook, FBF audit, FH scan, clichés, specificity, sentence variety, sensory layer, CTA, platform fit, character count. (20 seconds)
- 5. **:70 — Platform adaptation.** Run Prompt 15 (Multi-Platform Repurpose) for IG, FB, email, reel. (10 seconds)
- 6. **:80 — Final read-aloud.** Does it sound like you? Would you show this to your broker? (10 seconds)
- 7. **:90 — Publish.** MLS, social scheduler, email blast. Done.

Quick-Reference Card

Step	Check	Time
1	Input sheet filled	30s
2	Hook stops the scroll	5s
3	Every feature reaches Layer 3	10s
4	No Fair Housing triggers	10s
5	No clichés	5s
6	Specific beats generic	10s
7	Platform adapted	10s
8	Character count verified	5s
9	Read aloud, sounds like you	5s

Total: 90 seconds. From blank page to published, compliant, multi-platform listing. This is the system that ListWorks PRO was built to automate. The prompts in this guide give you the manual version. The tool makes it one click.

Bonuses

Bonus 1: Banned Words Checklist

Print this. Keep it on your desk.

 Don't Use	 Use Instead	Why
Stunning	Specific detail about what's impressive	Cliché — zero information value
Gorgeous	Describes the feeling, not the look	Same — tells nothing
Immaculate	"Move-in ready" + specific updates	Subjective, unverifiable
Must see!	"The [specific feature] alone is worth the visit"	Desperate, ignored
Won't last	Three offers already / X days avg in this neighborhood	Boy who cried wolf
Charming	Specific architectural/design details	Reads as "dated" or "small"
Cozy	Actual dimensions or layout description	Reads as "cramped"
One-of-a-kind	What actually makes it unique	Almost never true
Perfect for families	"Three bedrooms, open layout"	Fair Housing risk — checked
Safe neighborhood	"Walk Score 94, 2 blocks from park"	Fair Housing risk — checked
Priced to sell	Price relative to comps	Cheapens the listing
Opportunity	What the opportunity actually is	Vague — -2% Zillow value
Fixer / TLC	"Needs updating" + specific scope	-11.1% Zillow value penalty
Potential	What it could become + what it would cost	-4.3% Zillow value penalty

Bonus 2: Property Input Sheet

Copy this into a notes app or text file. Fill it before every listing session.

Property Address: _____

The One Thing That Makes This Different: _____

Buyer Persona: ☐ First-Time ☐ Family ☐ Luxury ☐ Downsizer ☐ Investor ☐ Second-Home

Top 3 Features (FBF to Layer 3):

1. Feature: _____ Benefit: _____ Feeling: _____

2. Feature: _____ Benefit: _____ Feeling: _____

3. Feature: _____ Benefit: _____ Feeling: _____

Emotional Angle (one sentence): _____

Specific Neighborhood Details: _____

Tone: ☐ Luxury ☐ Warmth ☐ Modern ☐ Urgent ☐ Investor

MLS Character Limit: _____

Bonus 3: Agent Bio Generator

Write a 3-sentence agent bio for me. Sentence 1: What I do differently. Sentence 2: What my clients say about me. Sentence 3: The one thing I want every potential client to know. Tone: confident but warm. No clichés: "passionate about real estate," "dedicated to my clients," "your home is my priority."

My name: [NAME]

My specialty: [SPECIALTY]

One thing clients say: [QUOTE]

Bonus 4: Colorado AI Act Compliance Statement

If you use AI tools to generate listing copy in Colorado, include this disclosure on your listings:

This listing description was generated with the assistance of artificial intelligence and reviewed by [AGENT NAME], a licensed Colorado real estate professional.

Place it at the bottom of every AI-assisted listing. This satisfies the general disclosure requirement under Colorado's AI Act (SB 24-205 / SB 26-189).

Bonus 5: Zillow Data-Backed Word Reference

Word	Price Impact	Speed Impact
Barn doors	+13.4%	57 days faster
Shaker cabinets	+9.6%	45 days faster
Luxurious (bottom-third homes)	+8.2%	N/A
Farmhouse sink	+8.0%	N/A
Subway tile	+7.0%	63 days faster
Captivating (top-third homes)	+6.5%	N/A
Quartz	+6.0%	N/A
Fixer	-11.1%	Slower
Potential	-4.3%	Slower
Opportunity	-2.0%	Slower
TLC	Negative	Slower

Source: Zillow Talk (2014), repeatedly confirmed in subsequent analyses. These are correlations, not guarantees — but the signal is strong enough to inform word choice.

Quick-Reference Pocket Cards

Print this page. Keep it on your desk. Use it on every listing.

Card 1: The 5-Part Listing Structure

#	Section	One-Line Rule
1	Hook	First 15 words decide if they keep reading. No "Welcome to."
2	Lifestyle	Sell the life, not the house. Paint a picture.
3	Features (FBF)	Every spec reaches Layer 3 — Feature → Benefit → Feeling.
4	Neighborhood	Specific beats generic. Walk Score, coffee shops, commute times.
5	CTA	Confident, not desperate. Assume they're already sold.

Card 2: The FBF Framework

Layer	Question	Example
1 — Feature	What is it?	"Quartz countertops"
2 — Benefit	So what?	"Never stains. Never seals."
3 — Feeling	Why does that matter?	"Sunday mornings around the island, coffee in hand, mess forgotten."

Card 3: Banned Words → Replacements

✗ Don't Say	✓ Say Instead
Stunning / Gorgeous / Immaculate	Specific detail about what's actually impressive
Must see / Won't last	"Three offers already" or actual data
Perfect for families	"Three bedrooms, open layout" (Fair Housing safe)
Safe neighborhood	"Walk Score 94, 2 blocks from park"

Cozy / Charming	Actual dimensions or layout description
Fixer / TLC / Potential	"Needs updating" + specific scope (-11% Zillow penalty)
Priced to sell / Motivated	Price relative to comps

Card 4: The 90-Second Workflow

Time	Action
:00-:30	Fill the input sheet (address, top 3 features, persona, tone, MLS limit)
:30-:35	Run Prompt 1 — Complete Rewrite
:35-:50	Run Prompt 13 — Compliance Check. Fix violations.
:50-:70	Run 10-point checklist (hook, FBF, FH, clichés, specificity)
:70-:80	Run Prompt 15 — Multi-platform adaptation
:80-:90	Read aloud. Does it sound like you? Publish.

Card 5: Fair Housing Quick-Check

Trigger Word	Risk	Safe Alternative
Perfect for ____	Familial status	Describe the actual space
Safe / Exclusive / Desired	Racial steering	Walk Score, verifiable data
Master bedroom	Gender-loaded	Primary suite
Retiree / Young professional	Age discrimination	Describe the home's features
Walking distance to church	Religious preference	Walking distance to downtown/park
Man cave / She shed	Gender stereotyping	Flex room, bonus space

YOU NOW HAVE THE SYSTEM

Here's what ListWorks adds

Everything in this guide is manual. ListWorks makes it instant. Same framework. Same compliance. One click instead of 15 prompts.

✓ **Fair Housing scan**

Automatic. Every rewrite. Catches violations before you publish.

✓ **One click, 5 formats**

MLS + Instagram + Facebook + Email + Reel
— all from one input.

✓ **Custom voice training**

Teach it your voice once. Every listing sounds like you.

✓ **CO AI Act compliant**

Disclosure built in. Colorado agents stay protected.
